

# CARDIOPET CONSULTATION REPORT

CONSULTANTS AND EDUCATORS FOR CARDIOLOGY, INTERNAL MEDICINE & RADIOLOGY

● 31 Atlantic Ave., 3rd Floor ● Floral Park, NY 11001 ● 930-728-1312 Fax: 516-354-4528

Stat Small Animal ECG Dr. Hamlin Code 46097

Date 09/27/95 Time 4:53 PM STRIP# 5269352 First Time

Veterinarian Bossart Phone (305) 561-8777 Fax

Client Ac: Patient Lady Species Canine Breed Great Dane

Sex Female Age 1 years, 6 months Wt: 130 lbs. 58.5 kg

*Riccardi*

---

## HISTORY AND PHYSICAL FINDINGS

VITAL SIGNS: Normal

GENERAL SIGNS: Panting

---

## ECG FINDINGS:

HEART RATE: 150

RHYTHM: Sinus Rhythm

ECG INTERPRETATION: Peculiar ventricular axis but probably within normal limits.

---

## DIAGNOSTIC AND THERAPEUTIC ADVICE

As per our phone conversation I see nothing abnormal on Lady's electrocardiogram. The left apical systolic murmur is of course, consistent with pulmonic stenosis or a ventricular septal defect, particularly if you are also to hear a systolic murmur at the right sternal border. I do not believe that this is a severe heart defect less we would see greater ventricular enlargement on the electrocardiogram. When you obtain your radiographs, please call us to discuss this trace. If you have any problems at any time, please give us a call. Again, I am sorry about the confusion of the electrocardiogram causing me to call you twice. I hope you got in touch with Dr. Pipera and we will get the opportunity of seeing you at the short course.
